Profile

I am a software engineer who is interested in back-end technologies. I improved myself in C# and OOP programming. Moreover, I have been taking an SAP course given by Turkcell and developing myself in ABAP specifically. Speaking of personal information, I am the kind of person who is a quick learner and adapts to new technologies. I love problem-solving, learning the best way to accomplish my task and improving my technical knowledge day by day.

Skills

ABAP, Java, C#, Python, React Native, SQL, PostgreSQL

Certificates

ERP - SAP Module Program

SAP ABAP Programming for Beginners with Burak Kocaaslan

Projects

• TUBITAK 2209-A Supported Project: Hybrid Mobile Application Development

Project name: Lost - Notice - Delivery Application

We developed a mobile application that makes it easier to find student cards that got lost in Firat University, identify them and finally return them to the owners. I established the database connections and provided database integration of the project.

Role: Database developer

• Precipitation Analysis Web Application

The Precipitation Analysis Web Application, which works based on time series analysis, was developed by our team for the purpose of analyzing and visualizing precipitation data of cities located in Turkey. Our team utilized SARIMA (Seasonal Auto-Regressive Integrated Moving Average) in order to model seasonal patterns and trends in rainfall accurately. SARIMA models are specifically designed to handle data with seasonal patterns. The goal of our application is to assist people at decision-making processes by predicting upcoming precipitation amounts while presenting city-based data to the user with interactive graphics.

Role: Full stack developer

Education

Software Engineering at Firat University

09/2021 - Present
